

Journal of Leukocyte Biology (JLB) Dedicated Meeting Issue

Be a part of a special JLB meeting issue!

The *Journal of Leukocyte Biology* (JLB) will publish a special targeted science issue featuring articles related to topics of the **2025 Mexican Society for Immunology Meeting**. Both review papers and original investigations are welcome. Selected contributions will be invited soon after the completion of the conference, and all submitted manuscripts will be peer-reviewed according to the high standards of the JLB. All articles will be published online immediately after acceptance, and the full “cluster” of articles will be published upon completion of the issue according to the timeline below. Special issue articles historically attract more downloads and citations than regular articles.

JLB publishes original experimental and clinical research that provides new insights into the function of leukocytes and/or stromal cells at the molecular, structural, cellular, and systemic level. The Journal scope includes all leukocytes (granulocytes, monocytes/macrophages, dendritic cells, T, B, and innate lymphoid or NK/NKT cells) and/or leukocyte products studied in the context of innate and adaptive immunity, development, homeostasis, host-pathogen interactions, immunotherapy, and immunopathogenesis. Pathologies of interest include (but are not limited to) immunodeficiency, autoimmunity, allergy, cancer, trauma, infections, and inflammatory diseases.

Guest editors for this issue will be: Laura C. Bonifaz, Diana P. Portales-Pérez, Carlos Rosales, Gerardo P. Espino, and Yvonne Rosenstein.

Participants may submit their work at <https://www2.cloud.editorialmanager.com/jlb-submit/default2.aspx>, selecting the **TSI 2025 Mexican Society for Immunology Meeting** according to the following **timeline**:
